**General Information**

The Bandit® Model 5620 is a two-channel, high-performance, stand-alone analog RF wideband downconverter. Packaged in a small, shielded AMC board with front-panel connectors for easy integration into RF systems, the board offers programmable gain, high dynamic range and a low noise figure. With an input frequency range from 400 to 4000 MHz and a wide IF bandwidth of up to 390 MHz, the 5620 is an ideal solution for amplifying and downconverting antenna signals for communications, radar and signal intelligence systems.

**Programmable Input Level**

The 5620 accepts RF signals on two front-panel SSMC connectors. LNAs (Low Noise Amplifiers) are provided, along with two programmable attenuators allowing downconversion of input signals ranging from -60 dBm to -20 dBm in steps of 0.5 dB. Higher level signals can be attenuated prior to input.

**Input Filter Options**

An optional five-stage lowpass or bandpass input filter can be included with several available frequency and attenuation characteristics for RF image rejection and harmonic suppression.

**Quadrature Mixers**

The 5620 features a pair of Analog Devices ADL5380 quadrature mixers. The ADL5380's are capable of excellent accuracy

with amplitude and phase balances of ~0.07 dB and ~0.2°, respectively.

**Tuning Accuracy**

The 5620 uses an Analog Devices ADF4351 low-noise, on-board frequency synthesizer as the LO (Local Oscillator). Locked to an external input reference for accuracy with a fractional-N phase-locked loop, its frequency is programmable across the 400 to the 4000 MHz band with a tuning resolution of better than 100 kHz.

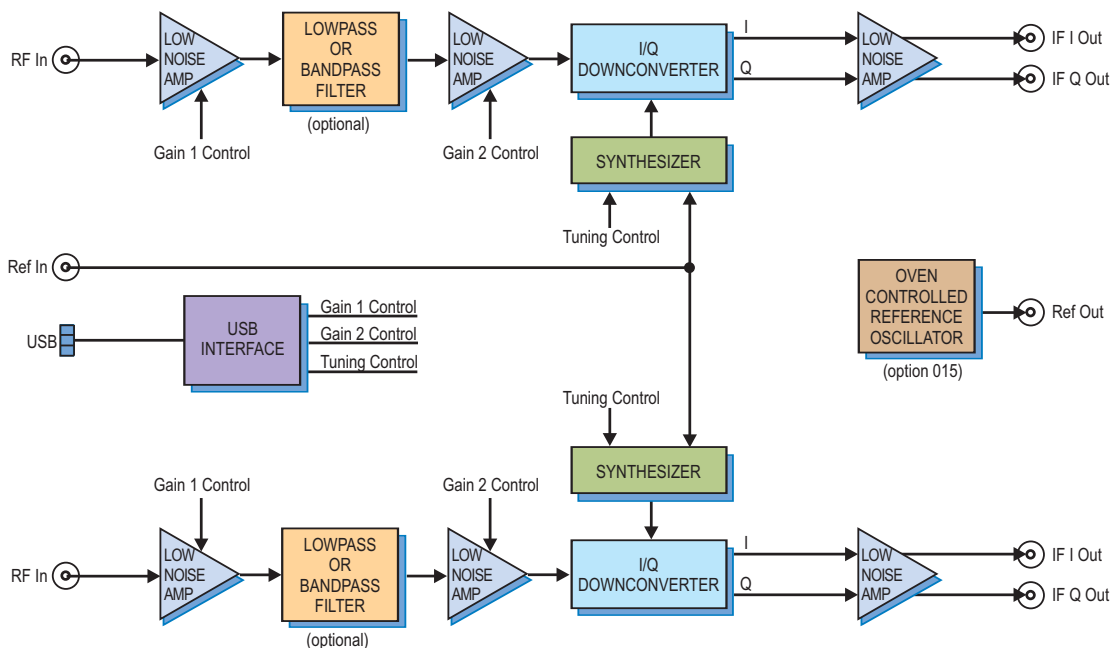

**On-board Reference Clock**

In addition to accepting a 10 MHz reference signal on the front panel, the 5620 includes an on-board 10 MHz crystal oscillator which can be used as the reference to lock the internal LO frequency synthesizer.

This reference is an OCXO (Oven Controlled Crystal Oscillator), which provides an exceptionally precise frequency standard with excellent phase noise characteristics.

**Wideband Output**

Output is provided as baseband I and Q signals at bandwidths up to 390 MHz. Alternatively, either I or Q output can be used at some intermediate offset frequency convenient to the application. User-provided in-line output IF filters allow customizing the output bandwidth and offset frequency to the specific application requirements. This output is suitable for A/D conversion using Pentek high-performance signal acquisition products, such as those in the Cobalt and Onyx families. ➤
