Quad or Octal Serial FPDP Interface with Virtex-6 FPGA - cPCI

General Information
Models 72611, 73611 and 74611 are members of the Cobalt® family of high-performance CompactPCI boards based on the Xilinx Virtex-6 FPGA. They consist of one or two Model 71611 XMC modules mounted on a cPCI carrier board.

Model 72611 is a 6U cPCI board while the Model 73611 is a 3U cPCI board; both are equipped with one Model 71611 XMC. Model 74611 is a 6U cPCI board with two XMC modules rather than one.

These models are fully compatible with the VITA 17.1 Serial FPDP specification. Their built-in data transfer features make them complete turnkey solutions. For users who require application-specific functions, they serve as flexible platforms for developing and deploying custom FPGA processing IP.

The Cobalt Architecture
The Pentek Cobalt Architecture features one or two Virtex-6 FPGAs. All of the board’s data and control paths are accessible by the FPGA, enabling factory-installed functions including data transfer and memory control. The Cobalt Architecture organizes the FPGA as a container for data processing applications where each function exists as an intellectual property (IP) module.

IP modules for DDR3 SDRAM memories, controllers for data routing and flow control, CRC support, advanced DMA engines, and a cPCI interface complete the factory-installed functions and enable these models to operate as a complete turnkey solutions without the need to develop any FPGA IP.

Extendable IP Design
For applications that require specialized functions, users can install their own custom IP for data processing. Pentek GateFlow® FPGA Design Kits include all of the factory-installed modules as documented source code. Developers can integrate their own IP with the Pentek factory-installed functions or use the GateFlow kit to completely replace the Pentek IP with their own.

Xilinx Virtex-6 FPGA
The Virtex-6 FPGA site can be populated with a variety of different FPGAs to match the specific requirements of the processing task. Supported FPGAs include: LX240T, SX315T, or SX475T. The SXT parts feature up to 2016 DSP48E slices and are ideal for modulation/demodulation, encoding/decoding, encryption/decryption, and channelization of the signals between transmission and reception. For applications not requiring large DSP resources, the lower-cost LXT FPGA can be installed.

Option -104 provides 20 LVDS pairs between the FPGA and the J2 connector, Model 73611; J3 connector, Model 72611; J3 and J5 connectors, Model 74611.

Features
- Four or eight channels of Serial FPDP interface
- Fully compliant with VITA 17.1 specification
- Fiber optic or copper serial interfaces
- One or two Virtex-6 FPGAs
- Up to 2 or 4 GB of DDR3 SDRAM
- LVDS connections to the Virtex-6 FPGA for custom I/O
Quad or Octal Serial FPDP Interface with Virtex-6 FPGA - cPCI

➤ Serial FPDP Interface
These models are fully compatible with the VITA 17.1 Serial FPDP specification. With the capability to support 1.0625, 2.125, 2.5, 3.125, and 4.25 Gbaud link rates and the option for multi-mode and single-mode optical interfaces, the boards can work in virtually any system. Programmable modes include: flow control in both receive and transmit directions, CRC support, and copy/loop modes.

Memory Resources
The architecture supports up to four or eight independent memory banks of DDR3 SDRAM. Each memory is 512 MB deep and an integral part of the board’s DMA capabilities, providing FIFO memory space for creating DMA packets.

In addition to the factory-installed functions, custom user-installed IP within the FPGA can take advantage of the memories for many other purposes.

PCI-X Interface
These models include an industry-standard interface fully compliant with PCI-X bus specifications. The interface includes multiple DMA controllers for efficient transfers to and from the board. Data widths of 32 or 64 bits (32 bits only, Model 73611) and data rates of 33 and 66 MHz are supported.

Specifications
Front Panel Serial FPDP Inputs/Outputs
Number of Connectors: 4 or 8
Fiber Optic Connector Type: LC
Laser: 850 nm (standard, other options available)
Copper Connector Type: Micro Twinax
Fiber Optic or Copper Link Rates: 1.0625, 2.125, 2.5, 3.125 or 4.25 Gbaud (copper rate depends on cable length)
Fiber Optic or Copper Data Transfer Rates: 105, 210, 247, 309 or 420 MB/sec (depending on link rate) per serial FPDP port

Field Programmable Gate Array: Xilinx Virtex-6 XC6VLX240T, XC6VSX315T, or XC6VSX475T

Custom I/O
Option -104: provides 20 LVDS pairs between the FPGA and the J2 connector, Model 73611; J3 connector, Model 72611; J3 and J5 connectors, Model 74611

Memory
Option 155 or 165: Two 512 MB DDR3 SDRAM memory banks, 400 MHz DDR

PCI-X Interface
PCI-X Bus: 32- or 64-bit at 33 or 66 MHz
Model 73611: 32-bit at 33 or 66 MHz

Environmental
Operating Temp: 0° to 50° C
Storage Temp: -20° to 90° C
Relative Humidity: 0 to 95%, non-cond.
Size: Standard 6U or 3U cPCI board

Serial FPDP VITA 17.1 Compliance

The 71611 fully complies with the VITA 17.1 specification as follows:

What Link Rate does the interface support?
- 1.0625 Gbaud
- 2.125 Gbaud
- 2.5 Gbaud
- 3.125 Gbaud
- 4.25 Gbaud

What Serial FPDP function does the interface support?
- Transmitter only
- Receiver only
- Transmitter & Receiver

Does the Receiver support Flow Control (setting the STOP signal)?
- Always active
- Not supported
- Optional (selectable)

Does the Transmitter support Flow Control (stopping data transmission on receipt of a STOP signal)?
- Always active
- Not supported
- Optional (selectable)

If the Transmitter supports Flow Control, after transmitting a STOP signal, how many 32-bit words can be received before a Receive FIFO overflow occurs?
- Programmable

Does the interface support CRC?
- Always active
- Not supported
- Optional (selectable)

Does the Transmitter support Copy Master Mode (insertion of additional IDLE ordered sets)?
- Always active
- Not supported
- Optional (selectable)

Does the Receiver support Copy Mode (retransmission of data)?
- Yes
- No

If Copy Mode is supported, what method is used for implementation (see VITA 17.1 Observation 6.1.4.4)?
- Method 1
- Method 2

Does the Receiver support Copy/Loop Mode (retransmission of data and setting Flow Control)?
- Yes
- No

What type of media is supported?
- Short Wave Laser
- Long Wave Laser
- Copper

What type of media connectors are supported?
- LC
- SC
- ST
- Micro Twinax

Which fiber transmit data frames are supported in addition to Normal Data Fiber Frames (see VITA 17.1 Permission 7.3.3.1)?
- Sync without Data Fiber Frames
- Sync with Data Fiber Frames

Does the Serial FPDP Transmitter stop in response to the Serial FPDP Receiver sending NRDY True (see VITA 17.1 Observation 7.3.2.2)?
- Always
- Never
- Optional (selectable)

Are status bits kept up to date when there is no data to transmit by sending empty Serial FPDP Normal Data Fiber (see VITA 17.1 Rule 7.3.3.8, Recommendation 7.3.3.2 and Suggestion 7.3.3.1)?
- Yes, empty frames transmitted
- No, status is not updated when no data is transmitted
